The Stübben Saddle Tree

“The seat of power” unique amongst a multitude of designed saddle trees. The Stübben tree is the soul of your saddle. The original Stübben spring tree is a patented proprietary development. The upmost made-to-measure link between horse and rider, this perfectly designed saddle tree works within the force, tension and pressures of the riding activity.

The rider sits comfortably in the webbing of the tree, which contracts slightly under the rider's weight. In turn the saddle tree stretches and counterbalances due to the just interior mounted steel springs. This takes great care of the horse's back. The horse ‘feels’ the riders aids, and the rider can feel exactly what the horse's responses are. The sensitive withers are effectively protected through the reinforced stainless steel gullet plate. There exists no seat that is more comfortable and pleasurable to a rider.

A Stübben saddle tree is precious, its workmanship intricate and unsurpassed in its impact on the riding activity.

Change-a-Stübben

The tree width of the Stübben saddles can be changed easily at any time with the „Change-a-Stübben“ system developed by our company. The amendments are either carried out by licensed partners or ourselves. Further information can be obtained from www.stuebben.com.

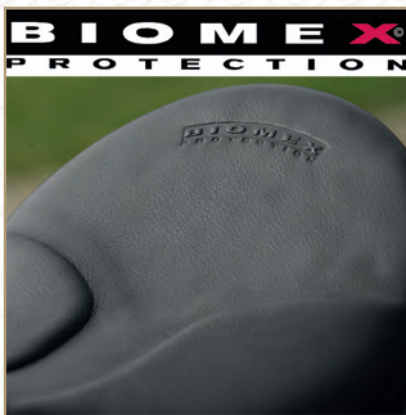

BIOMEX Saddle Seat Technology

Innovation to relieve pressure from the rider's spine.

Stübben has collaborated with the BIOMEX Technology Development Centre of Klinik Gut, a Swiss Hospital for Orthopaedics, Accident Care and Sports Medicine based at St Moritz. Combined with feedback from professional riders, we have developed an innovative saddle seat design which promotes correct posture and riding, thus relieving the rider's back from too much pressure.

False posture leads to an increased axial pressure on the back and furthermore to dorsal problems. Riders complain about occasional back pain, i.e. 23.8% experience pain while riding, and 55.2% after riding.

The new BIOMEX Saddle Seat Technology may be able to prevent back pain.

Stübben and Equi-Soft®

An exclusive partnership to improve the riding quality for horse and rider

The saddle technology Stübben Equi-Soft® consists of three components. A divided saddle tree, a swinging stirrup safety bar adjustable to four different positions as well as a new type of billet girth with elastic bands.

This style of saddle relieves the back of the horse in particular and creates a new riding feeling. Take the opportunity to ride our test saddles.

The three innovations can be each obtained as single option or as a package. At present they are available for the jumping saddles Edelweiss NT, Genesis CS, Genesis VSD, the hiking saddle Scout and the dressage saddles Aramis and Genesis.

Test a Stübben

Test Stübben saddles - test our saddles without obligation, wherever you are based.

The Test a Stübben programme is part of a wide range of Stübben services on offer. You will have the opportunity to test the most popular saddle models without obligation.

A network of Stübben test saddle dealers keeps a wide range of trial saddles for you to choose from. A trial ride will convince you of the comfort and excellent design of a Stübben saddle.

Once you have found your favourite model, the saddle maker will completely customize the chosen saddle to match you and your horse's needs. Upon your request, the saddle fitter will use a test saddle as a basis to have a perfect tailor made saddle, manufactured to your own personal requirements to shape and appearance.

If you are looking for an expert in your area, please do not hesitate to contact us or visit us online www.stuebben.co.uk.

Cantle protection

The cantle protector made of stainless steel is an attractive and practical protection. The cantle protector can be added at the manufacturing stage or as an addition later in the life of the saddle. The smart cantle protector is available to suit both the square and curved cantle saddles.

Rhinestones in cantle

For riders who want something special and unusual, it is possible to highlight the cantle with rhinestones. These stones will catch the light and make a special addition to the saddle.

This is a feature that will combine elegance with hand crafted quality.
